

Combining Multiple Dimensions of Knowledge in API Migration

Thiago Bartolomei, Mahdi Derakhshanmanesh,
Andreas Fuhr, Peter Koch, Mathias Konrath,
Ralf Lämmel, Heiko Winnebeck

Contribution of this presentation

Present a *framework* combining *multiple dimensions* of knowledge to *support API migration*.

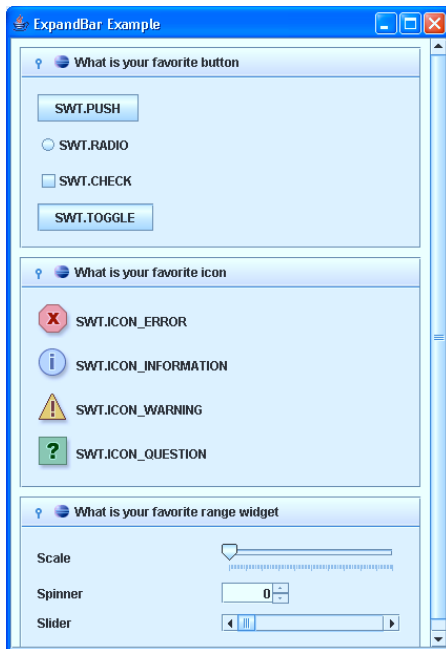

API Migration

- Special case of software migration
- Adapt software system to
 - replace old API (source API) by
 - new API (target API)
 - of the same domain (e.g., GUI development)

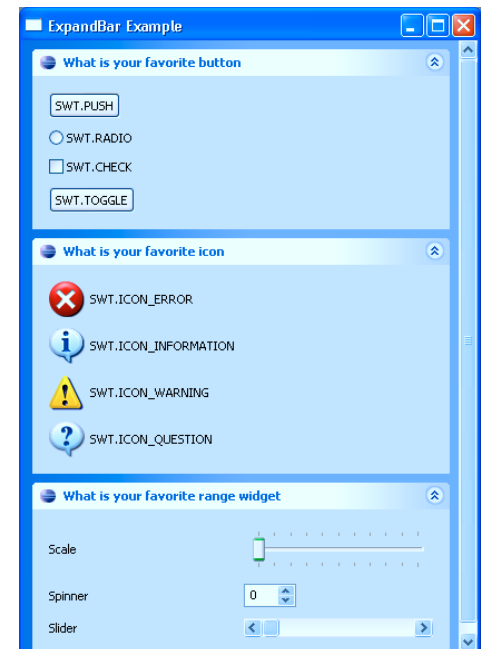

Why API Migration?

- **Legacy** APIs may be
 - outdated, not supported anymore
- **New APIs** may provide
 - new features
 - better performance, reliability, usability, ...
 - support for new system environments

Why API Migration: Example

Swing

SWT

Why API Migration: Example

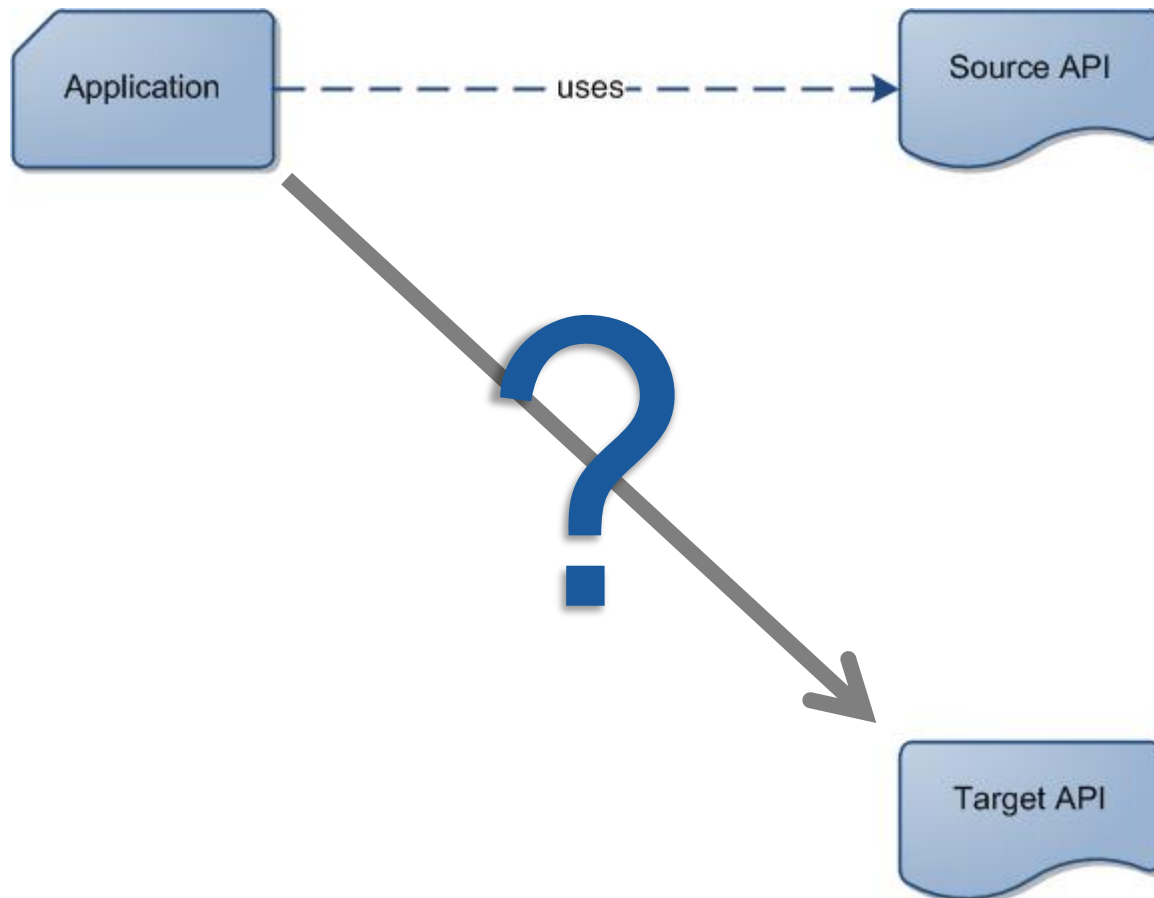

Swing

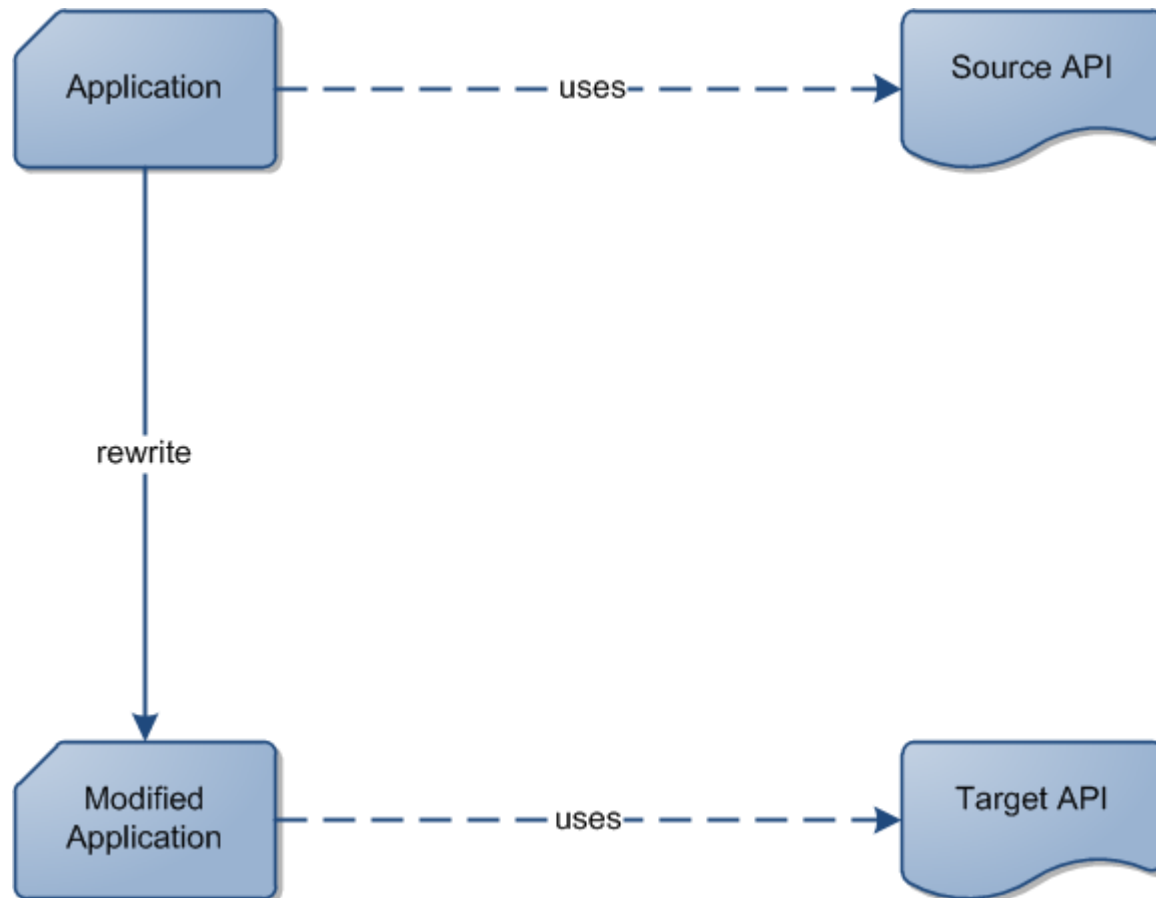

SWT

API Migration Approaches

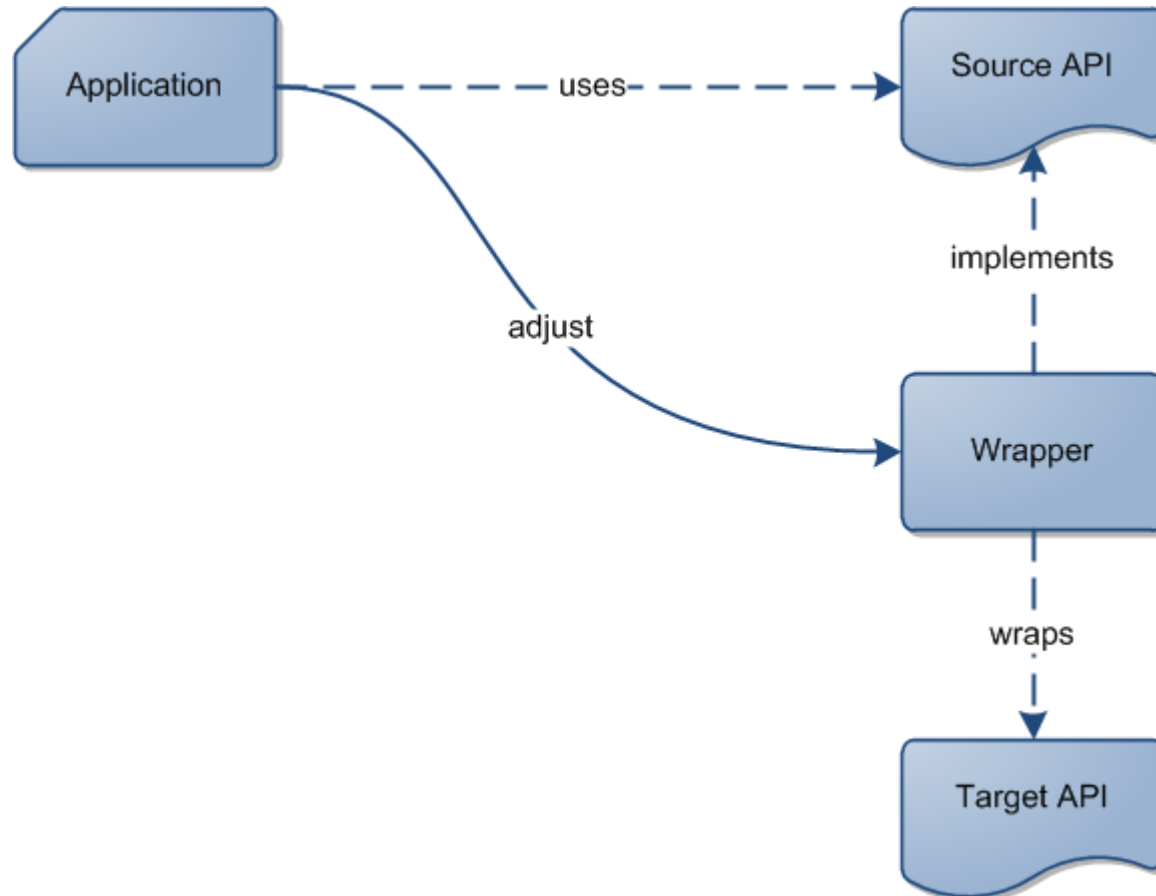

API Migration: Reimplementation

API Migration: Transformation

API Migration: Wrapping

Roadmap

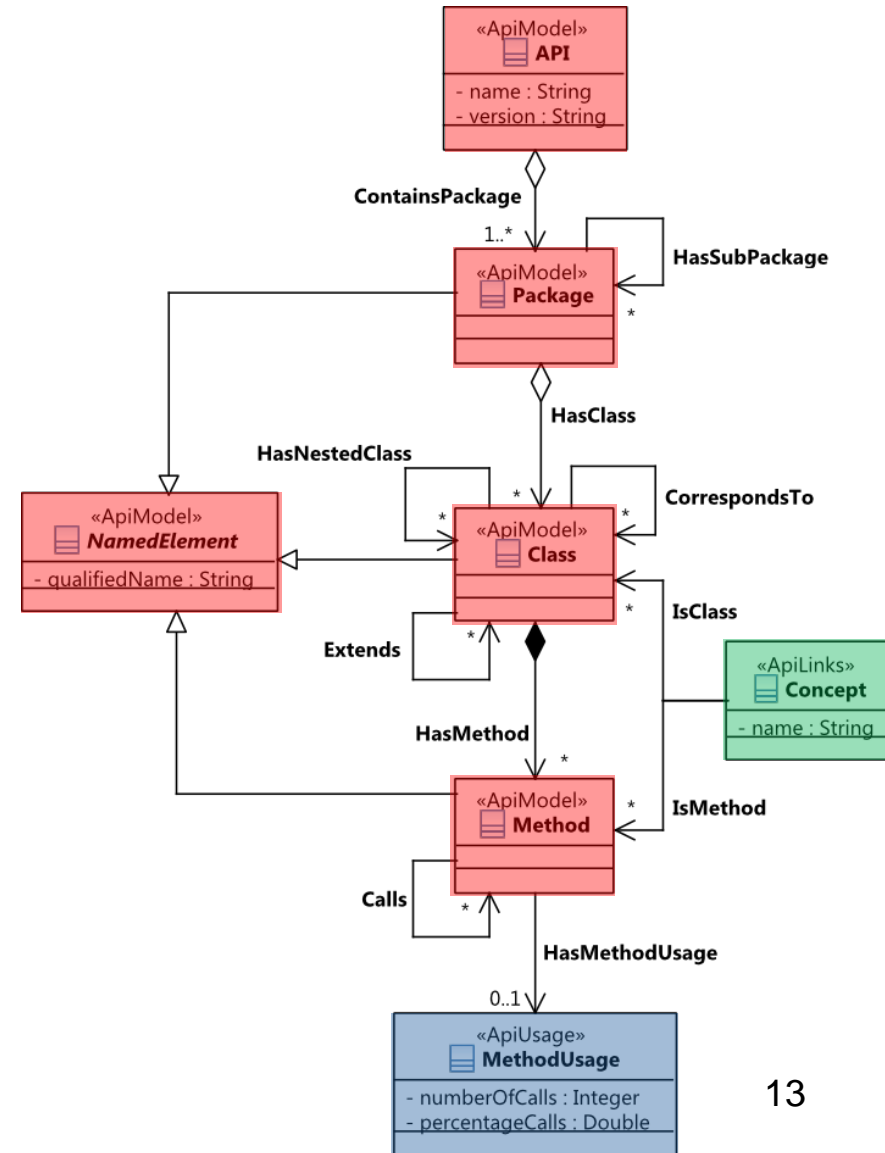

- Integrated **Repository**
 - Multiple dimensions of knowledge
- Wrapper **Assessment**
 - How to rate wrappers on their suitability?
- **Guidance** for Migration
 - How to extend/write own wrappers/transformations?

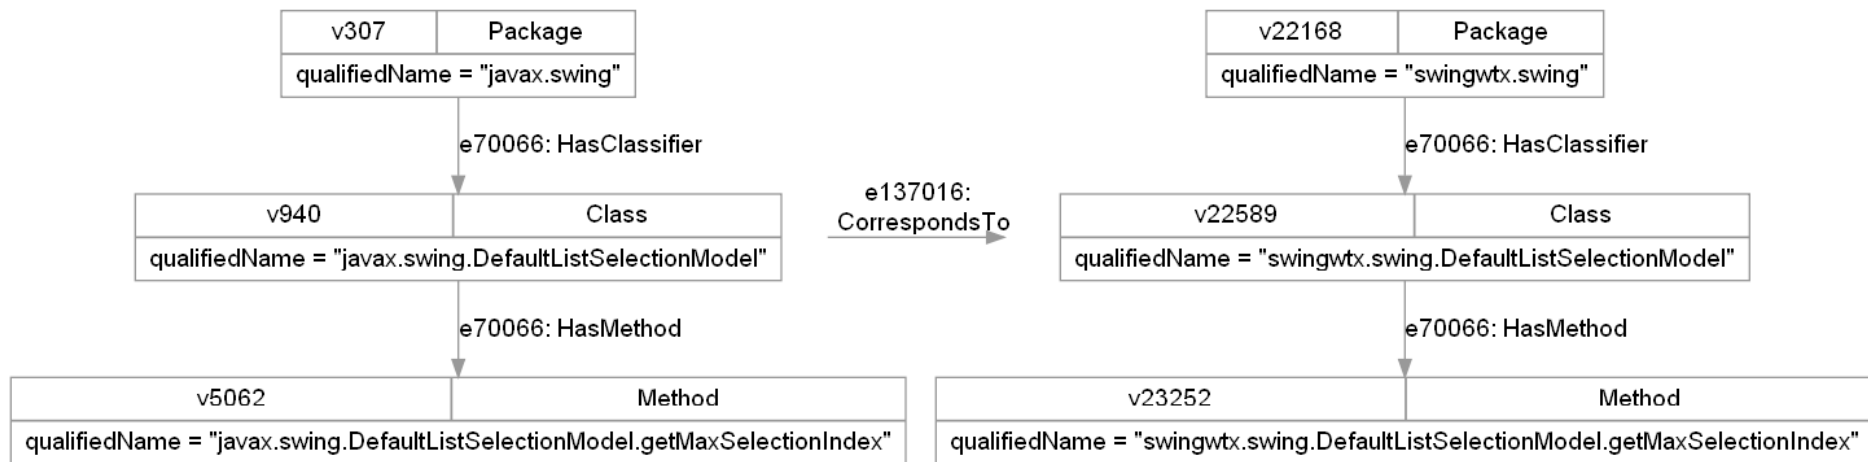

INTEGRATED REPOSITORY

Metamodel

- Simplified Java sources
- API Usage properties of 1476 SourceForge projects
- Ontology on API concepts

Repository Technology: TGraphs

Repository Technology: Graph Querying with GReQL

from

clsApi: V{Class}

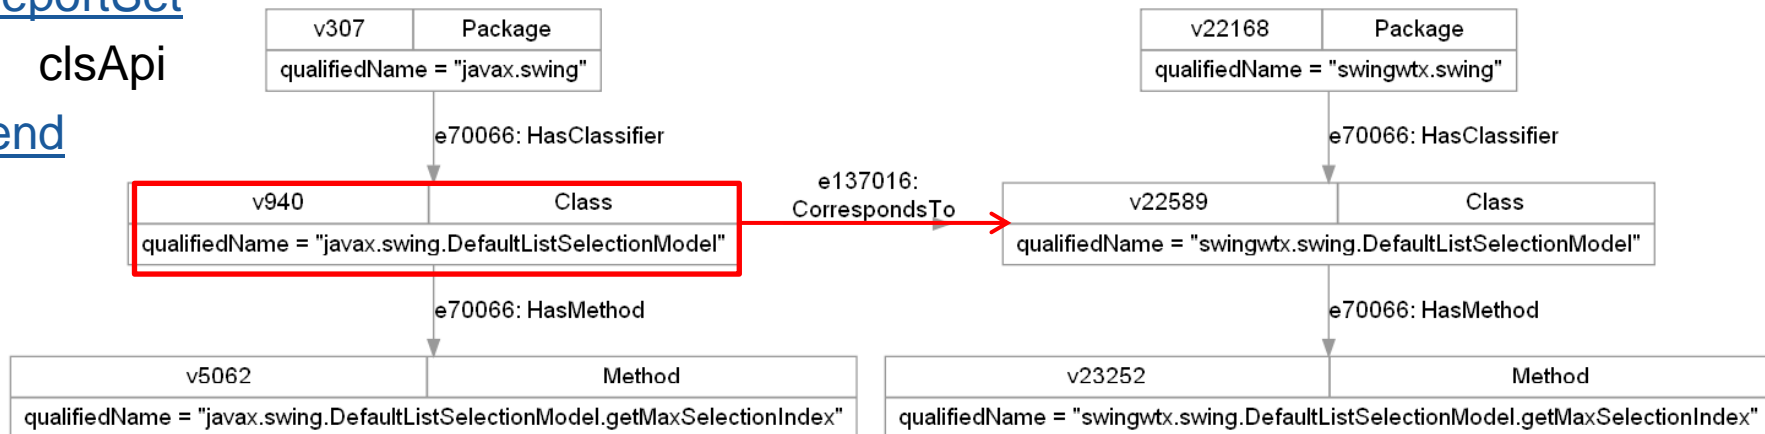

with

clsApi.qualifiedName =~ "javax.swing\..*" *and*
count(clsApi-->{CorrespondsTo}) > 0

reportSet

clsApi

end

WRAPPER ASSESSMENT

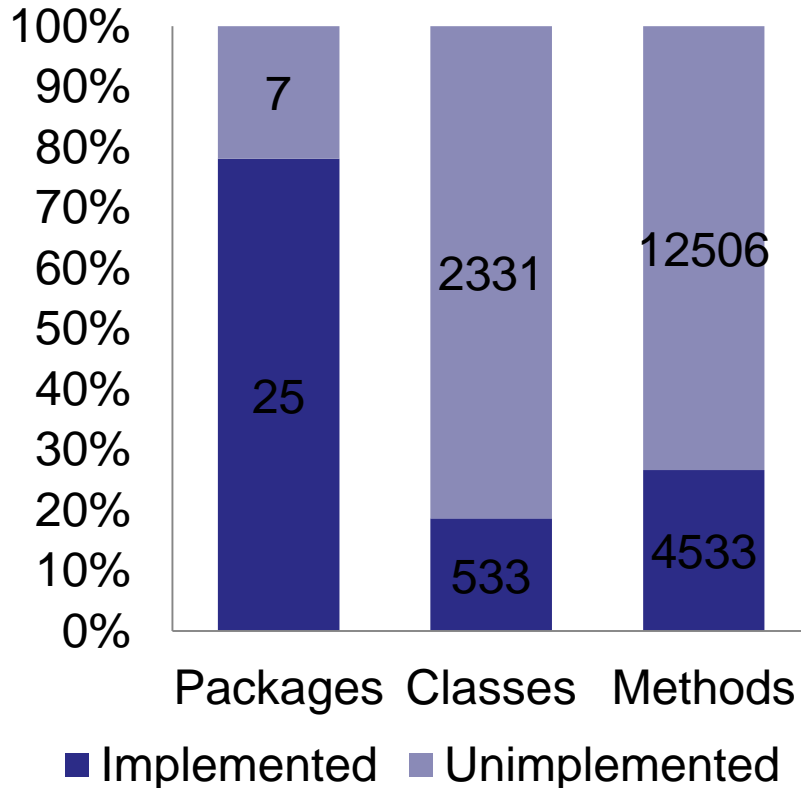

Wrapper Assessment: Goals

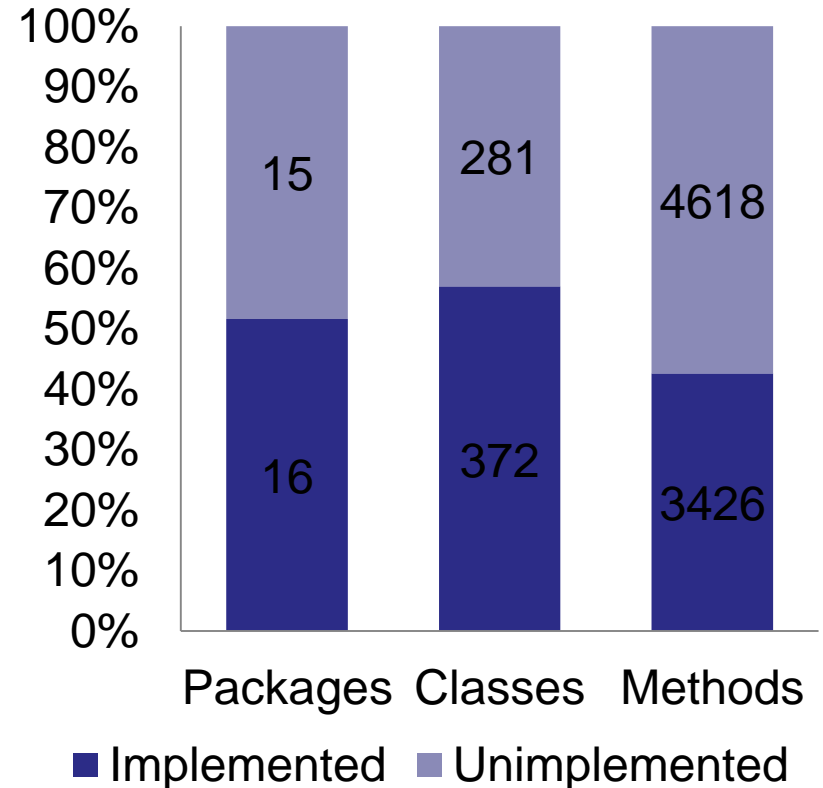

- **Compare** different wrappers for same wrapping task
- **Track development** of own wrappers

Wrapper Assessment: Source API Coverage

SwingWT

SWTSwing

Wrapper Assessment: Wrapper Compliance

- Simple coverage statistics do not cover more **complex dependencies**
 - Declarations in supertypes
 - Empty implementations
- Simple coverage does not reflect **usage** of APIs in real projects

Compliance: Declarations on supertypes

SwingWT

Missing methods

- Class missing
- Class present
- Impl. in supertype

SWTSSwing

Missing methods

- Class missing
- Class present
- Impl. in supertype

Compliance: Empty methods

SwingWT

Implemented Methods

■ Impl. methods ■ Empty methods

SWTSwing

Implemented Methods

■ Impl. methods ■ Empty methods

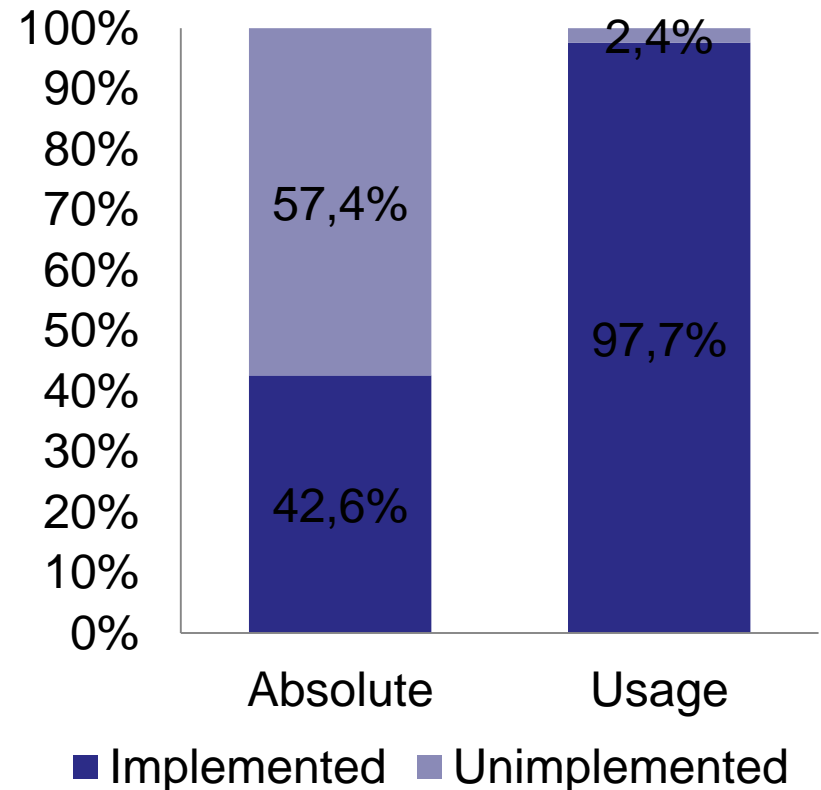

Wrapper Assessment: Relevance in Terms of Usage

SwingWT

SWTSwing

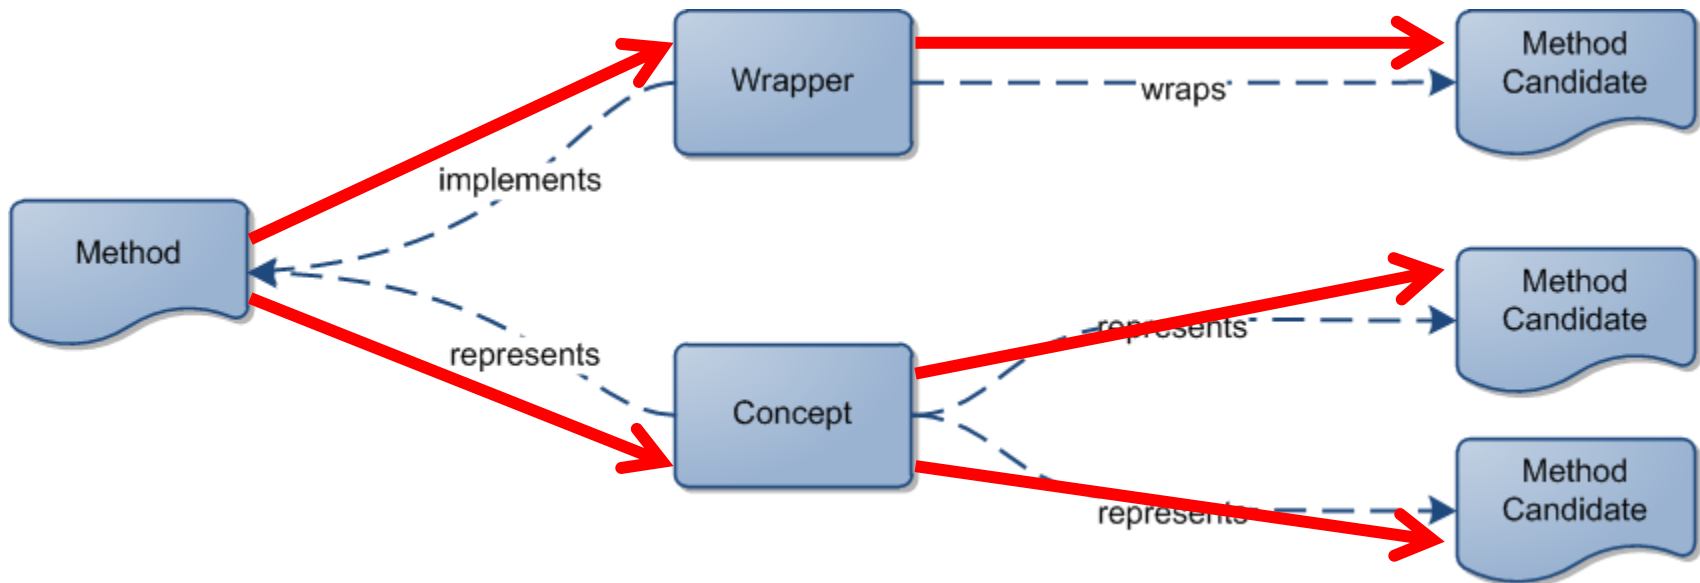

GUIDANCE FOR MIGRATION

Guidance for Migration: Goals

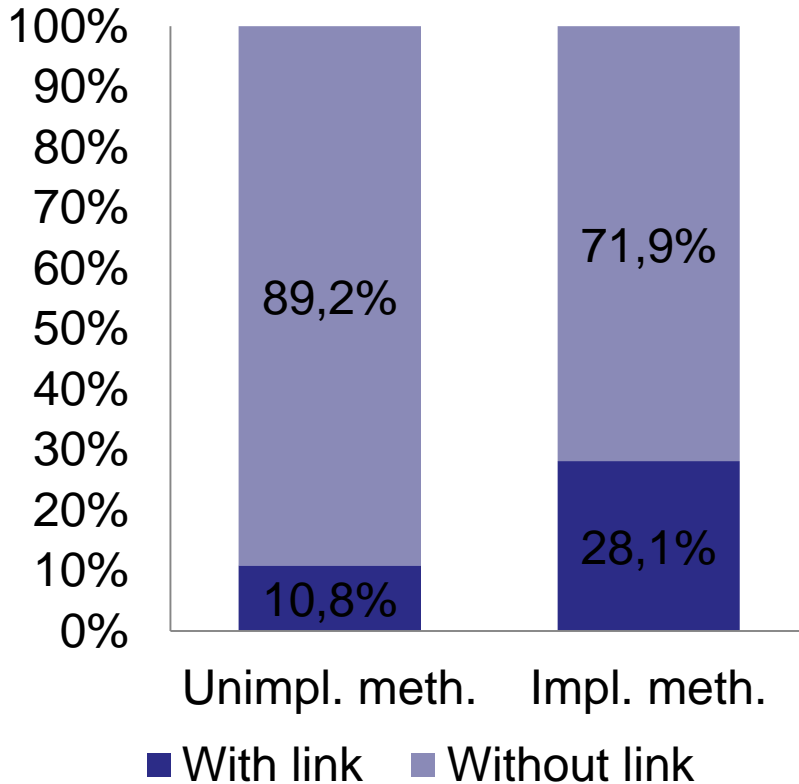

- **Extend** existing wrappers
- **Write own** wrappers / reimplementations / transformations
- Identify target API code **suited to implement** source API methods

Guidance for Migration: Concept-based Method Candidates

Guidance for Migration: Assessment of the Ontology

SwingWT

SWTSSwing

Guidance for Migration: Ontology Correctness

SwingWT
